Bandit Challenge logs

1) If filename has '-' to view use cat <-

2) escape spaces in filenames by using / to remove space or using "filename".

3) Use cmd ls -a to view all the hidden files

4) check every file content for the password

5) Use find cmd to get the file

   ⇒ find . - readable -size 1033 c ! - executable

   (bytes ?)
   (c → not)

6) Use find to get the req file

7) use grep cmd to find the keyword required

8) use sort cmd and pipe uniq lines

→ sort data.txt |uniq -u| → prints all the unique lines

9) first we strings cmd to search for all the string input then pipe grep "==" to get the key

10) Use base64 -d to decode the encryption, challenge done
